PROFILE

I always had a drive to create new things. Since I am a kid I always loved to draw and my curious personality made me always keep learning new things.

I studied Industrial Design because it was a good mix between arts, creativity, science and engineering. That lead me to learn a strong design methodology that helps me in almost every project I start and every skill I wish to learn.

I am now focused in web development and programming in general because I recognize the immense value it creates for everyone and that is just what I aspire to achieve with my work.

I am specially interested in Virtual and Augmented Reality, I want to change Internet and make it a 3D space for us to experience.

INTRESTS

- Drawing and Painting
- Animation and Films
- Hot-Wheels
- Fútbol
